Spatial force

Their development and evaluation by Karl Schappeller

1928

Special edition for the Sealand Business Club - Principality of Sealand - Government Commission 'Vrilia' © 2004

Foreword to the new edition

After the recovery of the writings 'vril-the primal force' and 'world dynamism' from the responsibility of the 'Reichsarbeitsgemeinschaft the coming Germany' in 2004 We now documents from the history of Vrilkraft research in provide German -speaking Central Europe for judgment formation.

This font deals with the almost completely forgotten today Karl Schappellers' work. This simple person was chose, on the way of intellectual inspiration to the 100 years of the obstacles to thinking of the stubborn and Nature science of Anglo - Saxon Mind over the elementals of his German fatherland and humanity Principles of Vril, primal or spatial strength to make and to demonstrate their technical application. - for reasons that We will soon be dealing with public Try initially failed.

The content of this script published in Austria in 1928 outlined More the philosophy or worldview behind this technique than this technology itself.

The side breaks and numbers were retained exactly for quoting the difficult to get the hard -to -reach original. The pages therefore do not always close flush off.

The implementation of the Schappeller plant (Dr. Gföllner) 19

The physical primal force - Schappeller (Fritz Klein) 27

Dynamic technology The nature and meaning of that of Karl Schappeller Discovered force

By Dr. Franz Wetzel and engineer L. Gföllner

Motto: «You should believe in Germany's future. On your people, Don't let them rob you of it Despite everything, everything that happened And you should always act As a matter of you and your actions alone The fate from German things And the responsibility would be yours. »

F i c h t e

The discoveries and inventions of the 19th and 20th centuries in the field of mechanics, physics and, as far as this in question Comes, the chemistry also moved in the Direction of an ever increased force effect with the matters of the mechanical apparatus that is always reduced. So z. B. to some extent Safe flying with aircraft only possible than the weight of the engine with the strongest energy power to a minimum size was pressed down.

The achievements of technology and physics in the past century and the two and a half decades of this century are Amazing, but not admirable in everything. Do you also have a number of more difficult and inhumane Physical work taken away and unexpected civilization The possibilities of development, as they did not incur the important factor without which no true culture thrives, the i n n e r e n ethics.

The technology and engineering was and is still today essentially an end in itself. Depending on the materialistic world of thinking and imagining, it primarily served to build up that materialistic mammonistic Economic ‹order›, whose Fire blossom in the pre - war period is not allowed to hide the fact that the same technique must be the social question with all its terrible consequences for nation and folk community, for culture and custom.

This technique has become a Golem after the war, which The more secure of the entire cultural man'sity threatens with annihilation, the more the inventions and discoveries in the physical and chemical laboratories and in the workshops of the Engineers and technicians rush. Is there today Hardly an invention of importance that does not immediately go to yours Usability for war purposes, i.e. for the annihilation of People, would be checked. The general one is still today Occurrence that a future war may mean the extermination of entire peoples.

This is of this terrifying development of war technology German people almost powerless than any other. The Reasons do not need to be mentioned here. Unfortunately, this forced backwardness of German weapon technology also reduces the general political influence of the German people in the peaceful competition of the nations. Because the higher s i t t l i c h e, which disarmed Germany in the balance of international politics is able to throw In the current world order, little spa value and weight. The armored fist rules next to the dollar.

Apart from this war -technical weakening of Germany, the entire economic technology of the German people is also in the argen. Despite all the efforts of our industry, despite all We are no longer able to keep our physicists, chemists and technicians as much as possible to constantly and adequately employ our population surplus; Yes, it was possible Not even to ensure that the large majority of our employees and workers 'and workers' earnings in turn returns the basis of a healthy “inner market”. The complete inadequacy of our inner market, of the normal goods circulation in your own country, which is even more is due to the lack of purchasing power of a heavily lying agriculture,

Experience further lighting from the threatingly large Passivity of the German trade balance. According to the situation, no German government is possible today to reduce the import of goods so that the trade balance sheet is in balance would come; Because the trade contracts are involved the most important production countries on earth and the fact that the German soil no longer fed on it is no longer fed on its own on it on its own can. The possibility of even fairly cheap to our population surplus somewhere outside of Germany's borders to relocate or even accommodate it that he It is preserved in the current political World order unfortunately closed.

The German people are through a lack of habitat, chronic unemployment of hundreds of thousands, even millions of People's comrades and increasing debt to abroad Seriously threatened in the basics of its existence.

This sliding into the abyss accelerate the unbearable Reparative loads and the tremendous taxes and social security contributions, which rest like an suffocating alp pressure on the whole German economy.

Almost worse than the economic consequences of such, on the Duration of unsustainable conditions are the moral-cultural and the national effects. The despair in a better future, which has grasped the longest circles of our people, leaves a frightening indifference to the high profession and the special human tasks of the German people in all Layers grab space. The people only live for the day; whether it stands on a swamp floor or on a firm surface, that is Most of them don't care. For higher values of morality and Culture, only a few more have for a the right sense, the word "fatherland" has its sublime Sound in the hearts of millions and millions of Germans lost.

Is it a miracle that such a people of all undermining is accessible?

But how, and this question is no less important, this should German people get a rebirth of their true nature? How should it be healthy, large and powerful again?

A sober look at reality tells us that with normal The conversion and the rescue cannot be brought about. All the efforts of the fatherland and who will be willing to sacrifice are to be drained and die out soon Performed, that teaches us the experience. Because all in such a way Complete “movements” for liberation and rescue Our fatherland freeze in the overly long duration of the preparation period for "organizations" with the inadequate bureaucracy of such structures and their purpose is exhausted with the Time more and more in parades (which basically mean nothing), in the publication of newspapers and magazines (which are pushed up to the members) and in accordance paid membership fees.

The dream of some of these patriotic organizations, on fascist way of one day the rule sees too and then creating "order" is a utopia - s o W i e d i e v e r h Ä l t n i s s s e u n d i e m a c h t m i t t e l h e u t e e G e l a g e r t s i n d. On a war between France, England and to wait for Soviet Russia and then when the western one Opponents of the recovery of Germany bound their hands are to start - that is thought frivolous. Because both the western and eastern neighbors in Germany would ensure that the fatherland associations in Germany would be used to get rid of any possibility - always assumed the current means of power of the entire German people. And even the unlikely case assumed that A large fatherland association would one day be able to to take the government in Germany: would he then have the opportunity to remove all those who we recognized as the German nation's dead graves? Parliaments and parties can suppress, the press throttled, the Jewish influence - maybe! - partially prevented, the reparation payments - maybe! - be denied; But that would still be German people in their naked existence from the outside and threatened from the inside. K e i n e n o c h s o n a t i o n l e o r g a n i s a t i o n k a n n a t u r u r u n s e r e s b o d e n d u n s e r e r u m w e l t, d i e u n b l i c k l i n d l i c h G e s i n n t i s t, m i t d e n d e r z e i t v o r h a n d e n m i t t e l n ä n d e r n.

This is the shattering tragedy that hangs over your German people like a terrible sword of Damocles Destruction threatened.

But if this is the case, how can the German people still be helped? -

Parties and parliament have failed; The economy as such is also unable to bring recovery and the fatherland organizations have neither above sufficient Motifers, still about the requirements for economic and moral rebirth of the German people.

There is no other way out: n u r something G r u n d l e g e n d N e u e s k a n u n s r e t t u n g b r i n g e n. Rescue before the Outer enemies and rescue inside.

How must this new be created so that it is real rescue can bring?

Already the huge task to solve demands help of universal dimensions. Small remedies can no longer help where the existence of a people is at risk.

Let us rethink the deeper causes of our national Misery, then we realize that a t e c h n i k o h n e e t h i k And a W i s s s s c h a f t o h n e c h r i s t e n t u m the decay have primarily indebted our folklore.

If a recovery should therefore take place from the root, then must a technique filled by high ethics and a thoroughly through and through Christian science are given.

H i e r a b e r s e t z d i e e n t d e c k u n g s c h a p p e l l e r s a . He is leaving completely new ways. A more than 30 year old Studied nature, unaffected by all school science, and A very unusual knowledge gave him deeper than well each person in front of him in the essence of matter and the Penetrate energy. What the most modern atomic physics and electrochemistry gradually put into partial results was Schappeller Mere familiar more than ten years ago. In hundreds of experiments, he tried out his practical usability gained through studying and so he found it indeed The basis of a completely new technology, its characteristic the knowledge of the dynamic unity of the world is.

E s i s t d a m i t d i e t e c h n i k a u s d e r m e c h a n i k i n d i e d y n a m i kü b e r g e f ü h r t w o r d e n. However, as it will be shown, this means the most powerful and serious upheaval

in all areas that humanity has ever experienced. Because the Control of the dynamics frees people from the botality of matter; Yes, she makes the entire matter and all of her Inherited energies completely subject to him. The often desperate Fight that today's man is forced to lead with the unruly natural forces despite all the amazing engineering art will give way to the full victory over them. Because what Schappeneller brings us is nothing more and nothing less than the primal force, which is the mother power of all matter and energy at the same time.

But what is this "primal force?" It is the power that «the world im In the innermost ”. The manifestations in which these have so far only been technically only in small scope and blind, so to speak, blindly Used strength towards us are different. We know them as a "cohesion force" and understand the concentric effect of the atmospheric pressure, with which the different bodies (or chemical elements) are held together. In magnetism we find the same strength again, only is they have become active here; She is already able to work too visible afford. In the atmosphere, it acts as a tension (previously mistakenly called "air pressure") and as such forms the power field of the Earth with all its vital functions. In the radioactive radiation, the primal force occurs in its reverse (eccentric) mode of action and at the same time leaves us the gigantic Energy ancestors that are in it. We also recognize by closer Studied radioactive radiation that every matter only concentrated Energy with a certain specific vibration is that inevitably passes back into radiation as soon as the general Tension (the negative atmospheric pressure) of the earth power field It has become less than the atmospheric pressure under which the matter in question is concentrated at the time (“chemical element”) became. After all, we have primeval power in every vacuum. Here we recognize them as a space for space, which are absolutely concentric works. There is no “nothing” in all of the nature created, no obvious space. Where there is no matter, there is energy there; A so -called empty space is therefore always a weight room that in turn tied to a matter of enveloping him and is determined by its entity in its specific tint. Hence the sentence:

R a u m b e h e r r s c h e n d i s t d i e n e n e r g i e, r a u m b e s i t z e n d - i e m a t e r i e.

But now the cosmos is a self -contained vacuum, a The tremendous weight room is that a still undifferentiated space of space, which in turn causes the specific formation of all planetary matter again through the negative atmospheric pressure In this way we in turn recognize the primal force in cosmic energy, The primal force in its purest and louderest entity.

All energies with which nature or humans work are Only derivations from primal force. Unfortunately, the person has it failed to study the mode of action of primal force in the activity of nature. If he had done this, then neither natural science in materialism would be suffocated, nor would the technology be so very misleaded that as an uninhibited golem the Humanity threatened in their stocks; Rather, she would have how that Power of creative nature, the structure. It is allowed here the consideration can be switched on:

When watt and Stephenson or Volta and Werner Siemens or Hertz and Marconi would have guessed which Danaergeschen their inventions of the steam engine, electricity and the Functional telegraphy made of mankind; If you had an idea of the tremendous upheaval that made your inventions on earth in a short time - whether you Then probably wouldn't have preferred to smash your brilliant work before the light of the world saw it?

This question is probably justified if we keep the terrible problem in mind, in which the "delighted" humanity with those (and many other) inventions as in a maze has betrayed.

This one consideration is already forcing us the inevitable Obligation to conscience, a n e u e k r a f t, a nose not to release earlier for general utilization than not Every conceivable guarantee is created for you Deutsche Volke and humanity are enough for a blessing. This responsibility grows into the immeasurable when it comes to the introduction of the dynamics working with the effects of primal force in the entire economic life, indeed in the entire state apparatus of our nation.

After this necessary intermediate weighing, we return to Schappeller's studies. Years of dealing with the nature and the mode of action of primal force (which he had recognized as a magnetostatic force) led him closer to the haunting Studied electricity. He recognized the electricity as a concentric gas consisting of hydrogen and oxygen in a closest connection with the power of the vacuum. In every electron Is this vacuum force available; Because every electron is one in north and south divided, i.e. magnetostatic strength. There now But, as already shown, every magnetostatic weight room as Emphalling the space of space, it is all suggestions from outside Accessible and can consequently be charged with any impulses. This discovery of Schappellers, experimentally exploited, is of the most monuator. However, it will Only received in a later section of this treatise can become.

Schappeller studied the being, the effect and the circulation the electricity in all conceivable phenomena. He found the fact that electricity, albeit latent, as a magnetostatic Cohesion, in every matter and through the production activated of the appropriate cycle, that is, caused by the interweaving of a purpose Resistance to work can be forced. Based on the simple zinc coal element, the electricity-generating effect is known to (Copper, iron, Osram) or coal formed closure manager Forced overflowing of the less firmly bound cohesion force of the zinc exists to a firmer coal, learned Schappeller in ever deeper penetration into the nature of fabric and strength To close a number of fabrics into elements and their cohesion forces in the form of specific electrical currents for To bring flowing. The most important result of these decades of research and experiments was the E l e k t r i z i t ä t a u s s t e i n, i.e. from v i t a l e r electrical Power.

In contrast to the dead electricity of metals, as it is obtained today, we call this electrical force. every stone from its earlier formation is remanent of vitality. Because the rock mantle of the earth is out countless living beings formed and does not have the life -destructor Conversion of the

Metals through fire. The different possible uses of the vital electricity are still particularly too discuss.

The nature and utilization of those developed by Schappeller The easiest way to understand universal energy is by the Studied the simple zinc coal element. Electric current arises here when the concentric around the coal tab Zinc coat with the former by a suitable closure manager is connected. But we have already heard that 2 any body that have different cohesion power in a electrolyte can be linked by a closure manager and then deliver an electrical current of certain quantity and quality. In this way logically progressing, Schappeller brought the most tremendous thing, which in a technical relationship ever succeeded in one person: he has the earth and the atmosphere, and beyond the K o s m o s connected by a closure manager of your own kind and thus that largest conceivable element made. Chemistry teaches that the Negative atmospheric pressures (incorrectly called "solution"), through which all planetary elementary substances are held together, in the sizes from 10-38 to 1048 Move atmospheres (hydrogen - uranium). The greater the voltage difference of the cohesion forces of two to an electrical Element connected raw materials is all the greater the electrical current obtained, provided that the applied Closure manager is the right one. This statement on the Schappellelle Universal element transferred Earth-cosmos, the assumption that the energy obtained from this element is without further ado must be.

The technical apparatus of this element should only be done here To be indicated. Understanding their mode of action Passes in a more detailed degree, combined with laboratory demonstrations. It may be enough to notice that that Primal force element has been physically tried and its countless uses are constructively determined.

Since the earth and atmosphere (or cosmos) are once given, it was only necessary to between both electrodes To find the right closure manager through which the Earth-Kosmos energy cycle is caused. The nature of this closure manager was recognized by studying lightning, his Origin,

its entity and its changes. Because lightning is nothing Other than a tension between the earth, the reservoir of all forces, and the atmosphere. This compensation in the shape of an electron charged with glowing magnetism. The S t o f f l i c h e source of this magnetism is that Water in the storm cloud, which had risen from the earth in the form of a haze and was over -saturated. The e n e r g e t i s c h e source of lightning is in the magnetic power field of the earth, That means looking for the atmosphere. You can therefore flash also call a concentrated glowing atmosphere.

Due to this short consideration, it results in: to create constant flash, then the closure manager is found between the earth and atmosphere, through which A circulation of flowing electrical energy from the inexhaustible power reservoir earth to the atmosphere or to the cosmos and has to go back; A circulation, the current of which depends solely on the charge of the artificially generated lightning.

These constant flash, which we also “electrical steam” or "Concentrated energy", but preferably "glowing Magnetism », to create and to use it as Cosmic closure manager to find the appropriate apparatus, has succeeded in a complete manner. Also in the construction of his Apparate is Schappeller from the studies of well -known forces and theirs technical user methods. Only he has various common tool and machine shapes, so to speak Turned upside down, that is, the conversely, as usual.

The study of a telegraph management teaches us that the electrical required for telegraphing or telephoting The circuit must be absolutely closed if the telex or speech and hearing apparatus intermediary as a resistance should work. On the one hand, the circle closes the line wire, on the other hand the earth, in the groundwater of which both end stations of the line are sunk earth panels. It shows here that the earth as such is a very excellent locking manager for electrical stream. She has to be because she yes the reservoir of all planetary forces and the earth's magnetism nothing else

is as the mother power, which, stimulated in a certain way, electrical sparks or electricity testifies.

The amount drawn from the strength reservoir earth is Depending on the force with which the reservoir sucked becomes. The principle of the suction lifter is used here. The stronger and longer on the suction lift, the more liquid it deprives the container to which it is set. So delivers Also the dynamo of today's electricity work is only like that Lots of electricity than the consumer apparatus (engines, incandescent lamps, etc.) connected to the line network, i.e. h. Pull off. Of course, this only applies within the capacity (Charging or performance) of the dynamo, which in turn Due to the strength of the cohesion power of the material, it is exist the rotor and stator of the dynamo. The proof that Earth magnetism is an inexhaustible, easy -to -use source of electrical energy, in the meantime a Wiesbaden engineer (see Munich newspaper from 24th Dec. 1927) provided. The Hamburg physicist Hermann Plauson has the same proof, only with more cumbersome devices, delivered years ago.

Another step towards the discovery of Schappellers meant the Use of the atmosphere as the carrier of the emitted Electrical waves between two units (transmitters and recipients) in the radio relegation and wireless telephone. So far, of course, it has only been able to transmit electrical power to quantitatively modest dimensions. This As already mentioned, transmission is done in the form of pathogens waves. Laving electrical power through the atmosphere would be at least a very dangerous one would be at least Undertaking, as the large -scale attempts proven Teslas. X-rays can mediate the Coolidge tube to about two meters are sent freely through the atmosphere; Of course is their effects destroyed on all organisms. These X -rays are multiplied and death rays are of unforeseeable effects complete.

But Schappeneller did not want to go out on such effects. He wants tools of the structure and peace, not weapons of the Create annihilation and war. He sees the German people of humanity in the securing of the world peace and the

Creation of a culture inspired by real Christianity. Therefore If he wants to give the German people defense weapons of unexpected strength, but no weapons of attack, the ultimately Always lead to mischief. So Schappeller has all the way Tempting offers rejected, the one he usable Dynamics of the ether (as the primal force is also called) for construction to provide new war tools; It would be him Easy, every radio station from a wave transmitter into one Radiation channels of terrible effect. Because the Conductivity of the atmosphere for rays of all kinds with a suitable one The transmission system has been proven.

Schappeller also turned the previous energy end technology: he sends not life -threatening electrical energy through the atmosphere, but the harmless motherhood of electricity, the magnetism in specifically designed form. The necessary for a wide variety of machine and other purposes Electrical energy is then conveyed everywhere on the spot New motors that are suggested by this magnetic radiation From the earth magnetism that is available everywhere in abundance won. So the reverse is done here as in today's electricity generation and utilization. In the latter the magnetism in the power plant (dynamo) held back and the Electricity sent out - Schappeller does it the other way round (namely like nature): it sends out the specifically excited magnetism and causes electricity to generate in any desired form at the consumption variety.

In order to achieve the indicated effects, it was necessary to construct a technical apparatus in which glowing Magnetism generated and as a closure manager between earth and Atmosphere can be maintained permanently. This apparatus is Relatively simple. Basically it is nothing more than that Translation of the natural power flow of all organisms in Technical. It essentially consists of a hollow ball in its dimensions, the wall of which is made of magnetic slats, the gaps of which with a non - magnetic diaphragm. Inside the Ball (which is actually composed of two hemispheres), protrude two magnetic poles, the tip of which is a very specific one Have received form. With the - for the first time in the technology head Head set - Poland are hollow, with

Elekfestkmasse (this is a mass that can be charged with permanent electricity, the counterpart to the permanent Magnets) Gladed wires. These wires lie In multiple tight spirals inside the ball and are from The ball wall separated by an insulating layer. In the remaining small cavity in the center of the ball between the pole tips, the magnetostatic filling comes, which is more atmospheric Casting manager serves and their nature and generation is the absolute secret of Schappellers. The hollow wires are over one specially constructed battery on the earth with a pole. The second pole is created in the middle of the ball and from here can then then electrical energy in any shape and strength to Sight performance that the ball was once indicated become. The energy taken from the ball continues to complement itself In the same amount of earth magnetism. The ball itself rests in a magnetic trot arm and has a special guidance, through which it can be switched on and off. Full inside Strongest magnetic voltage (through which you are constantly on the The tension of the atmosphere reacts), the ball on its surface is magnetically indifferent. It is the ideal, so to speak, Image of the earth, even a small artificial earth with one Own power field. If the ball is switched on, then one reacts Magnetic needle on their North and South Pole as well as on the north and south pole of the earth. This ball is a generator, accumulator, Transformer, antenna and stator in one. It gives electrical Strength to all possible uses of the light and strength, Stark and weak current technology. Pained with a particularly constructed engine, it is the first real electrical engine. The ball allows another sensible device To make a wave transmitter that sends out any number of waves at the same time.

With the help of this ball and its almost amazing performance, the entire light and power technology can be completely changed within a short time, because the costs The energy generated drops to a minimum, while the possible uses are countless. New engines for everyone Purposes and levels of performance, new automobiles and locomotives, New aircraft and all high current machines are with the new strength as easy, cheap and reliably operated as The entire apparatus of weak electricity technology

Like new, individually coordinated telephone, telecommunications, Kinematographers, the sound and image transmit at the same time and plastic, new lighting bodies and much more. From The machines are particularly important for agriculture To promote plant growth, which indeed two harvests enable in the year.

The commissioning of this energy -producing balls sets this The presence of so -called z e n t r a l e n; these are Similarly constructed balls of larger dimension, which (comparable to today's electrical transformer stations) Radius of action of 5 kilometers each. Because except for a distance of 5 kilometers, the conductivity of the atmosphere for the Transfer of the specific strength pathogens with the help of the current constructions of Schappellers.

However, all controls are also wirelessly connected among themselves and without exception also with the so -called primeval machine, from the You have received all your first -time filling, energetically connected. The installation location of this primal machine is kept secret. As already mentioned, the so -called filling is generated by the primer machine, which is the specific glowing magnetism, without which neither the headquarters nor the individual engines, machines and devices work. The filling takes place by special L a d e m a s c h i n e n, which in a larger number of places be set up; the spherical engines themselves, the number of which is in the Millions will go, wherever suitable factories and Workshops exist, be manufactured and come from there Out to the charging station. The power of the Urmaschine, which is also used by the filling with every single engine and other apparatus is switched.

The primeval machine itself is an aggregate made of 7 motor balls, from 5 by a 6th circle connected to the earth, and thereby constantly those of a 7th, also (but with the uneven name Pol) Magnetic -based spheres on the earth Cor off the ray bridge and concentrate the magnetism inside.

In addition to the power extraction machines A second, possibly even more important type of machines: the S t o f f f g e w i n u n g s m a s c h i n e. Through this We are able to machine, every fabric lying in the earth without Different and to bring them into radiation from every depth and to the way a

energetic electrolyse baths on the earth's surface again To compress matter. The knowledge of the most modern atomic physics And electrochemistry already confirms the discovery of Schappellers, that every matter made of cosmic energy, with specific Vibrations were charged, is concentrated. Therefore it can Matter by radiation into their energetic form of condition and from this again in the gaseous, liquid and fixed state of aggregation. The negative necessary for this Atmospheric pressures (or rather the atmosphericus) delivers The condenser.

An expansion of the condenser is the S t o f f u m w a n d l u n g s m a s c h i n e to convert to another on the way to the energetic electrolysis bath.

The fabric extraction and fabric conversion machines can be used to be set up and put into operation. In the In contrast to the engines for lighting and power generation, which Free trade is to be handed over, the fabric extraction and conversion machines are not a merchandise, but later Inbusable monopoly of the German state and until then Ownership of the Association of Schappellers. You ensure that State the necessary mastery of the entire economic life in the entire empire, yes, an unassailable supremacy the whole earth.

The entire new technology, including the primal machine, is supposed to the absolute management of a newly created organization stand that come after a perfectly organic and that Responsibility consciousness of each individual member is absolutely built up. This organization, the structure of which is still being set up, but in detail here should not be laid down, among other things, also worry that the introduction of the new technology is not as a revolution, but happens as evolution, d. h. that today's technology gradually replaces and thereby avoided an economic disaster.

The introduction of the entire from the dynamic technology The resulting innovations in Germany should claim about 7 years; It is in a so -called implementing program Point by point after a detailed studies. The essence of dynamic technology prohibits theirs on its own delivery

on today's conscience and irresponsible economic capitalism, which neither for German nor for Christian thinking Has meaning. Rather, it is determined, the re -hiring and Renewal of the German people and the Greater German Empire to bring on a federative basis and the German people To enable realization of his great humanity task.

Only those Germans become the new technology in hand are given that have reached the moral height as humans and Christians, from which the real human culture can only be created. But then they are really that Appropriated universal power that will initiate a new world age in every respect. Free inside, protected against everyone Outside, the German people, with tremendous power, but also with equally great responsibility, the German people are given the lead among the peoples Take over the earth, and then the visual word will come true:

..... And so is on the German
being Once recover the world!

The implementation of the Schappeller plant

By Dr. Franz Wetzel and engineer L. Gföllner

In the practical implementation of the discovery of Schappellers must always be kept in mind that it is not a New invention, i.e. a new machine and the like, acts, but about the discovery and usable of the only once existing universal energy, the primal force. From this usable manner, a whole new technology grows nicely and, there The released primal force of their masters an insurmountable Power gives a whole new human age.

It is therefore essential to evaluate the new force to check and prepare from different points of view.

1. W i r t s c h a f t l i c h u n d t e c h n i s c h brings the new strength A complete change, a revaluation of all values. It Hardly a machine, hardly a technical apparatus that does not in its mode of action and economy of is influenced or even out of course. The New dynamic technology includes all types of power and weak stream motors. Without costly fittings In the future electrical L o k o m o t i v e n u n d a u t o m o b i l e manufactured and in the very cheapest way (by extracting electrical energy from water), or, where there is enough Central are set up, even easier by circuit to them. New aircraft with magnetostatic Strength and control, definitely crash and collapse-proof, can be a fraction of the costs of today's aircraft or even built airship and without lengthy training everyone can be served. They too are either

switched to central and as a commercial aircraft can only move between certain airports, or they are Completely independent and freely controllable. It can also be big L u f t s c h i f f e build, which is amazing using the new strength Bridge the longest distances for a short time and without engines or propeller noise. Also the S c h i f f a h r t Seas as on inland waters will be able to switch to the new drive power. The existing ships can be equipped with the new engines without too much costs; At the same time, complete new constructions can be carried out.

No less important than the new motion engines are the S t a n d m o t o r e n based on the new force. In particular, however, the importance of the 10 to 10 km Empty centers (comparable to today's transformer stations). These central forms through their mutual circuit above the area you recorded Power network of the most powerful effect. They serve as a switchover work For all the thousands, even millions of strong and weak stream motors that are distributed across the country and establish the dynamic connection of them with the urinum. They are of particular benefit to raise the L a n d w i r t s c h a f t l i c h e n p r o d u k t i o n. By producing stone electricity, If you can add the natural fertilizer and structure and the cultivation material and under certain circumstances to produce two harvests every year. The central assets But also with the help of their extraordinarily strong and appropriate radiation, the To influence and prevent natural disasters. They put yes the strongest magnetic bridge between earth and atmosphere it that can be thought.

In general, the new power to drive a l e r n u r d e n k b a r e n stable engines on the way over the Central. These engines work with a maximum performance of so many horsepower when they were first charged during the load. Every force consumption is automatically supplemented from earth magnetism immediately. The B e l e u c h t u n g of the houses and towns, Finally, the whole area with the central area Regardless of foreign power plants. Every house, every community Creates yours

Electricity itself. Own incandescent lamps, adapted to the new force, Donate a bright, pure but harmless light. Also the B e h e i z u n g is changed from the ground up. The new radiators create a healthy, natural warmth in contrast to today's steam and electrical heating systems. Every risk of fire does not apply, the power of the cities stops, our industrial ends burned through coal dust and sulfur gas to deserts are turned into green, blooming terrain.

The F e r n s p r e c h - u n d f e r n b i l d w e s e n is through the new strength also redesigned. We get the personal Recipitation, which coordinated accordingly, only with those People connects (equally where we are right), with which we intend to speak. The transmission of images And processes of all kinds at any distances, also related to B. with musical performances, the new strength being easy. So whole operas can be with the Added Music transmitted become. The new Recognition and long-distance screen apparatus can travel anywhere are taken away and put into operation everywhere.

The H E I L K U N D E will take great profit from the practical application of the primal force. Investigation, diagnosis and healing procedures are on the energetic, i.e. h. essential basis and thus the demand of the insightful modern doctors (See Speech Privy Councilor Dr. Sauerbruch at the German Medical Day in Bonn 1927). Then there will be no incurable diseases. Also the other sciences and themselves The arts will draw the greatest benefits from the new force, since very new research instruments, e.g. also on the Astronomy and astrophysics areas, provided become.

In short, the scope of the new force is unlimited, Because it is the universal energy; There are only in the above a number of examples. Well over a hundred Constructions are already available and all forms of application are tested.

The area of application of the Ko n d e n s m a s c h i n e n is no less extensive, which- in contrast to the strong and strong and Weak current motors-are not a merchandise, but monopoly of the

future state. These condensed machines disintegrate into fabric extraction and fabric finishing machines. With It is possible for your help to bring every fabric resting in the ground, the same depth, in radiation and then through Radiation condensation in the condenser again to matter to matter to compress. All fabrics can be refined. In such a way, the entire mining company is gradually switched to day construction and man from the always life -threatening, harmful to health and a cultural man unworthy Work in the depths of the earth.

By extracting the radium, gold and other valuable fabrics, as well as through the generation of pure carbon in the form of diamonds, new wealth can create the social needs of our people in a short time and in connection with the countless new work opportunities be remedied thoroughly. One of the most urgent public Work that has to be neglected as a result of lack of money, the re -establishment of the streets and the new system of such, will experience an unexpected revival by the condensed machines. It will be possible with the help of electricity Stone the rock masses required for road construction too melt and the road blankets similar to liquid asphalt pour. In a similar way, new, high -quality building materials can be produced in quantities.

From these few information it can already be seen that the area of application of the condenser is as unlimited as that The strong and low current engines.

2. S o z i a l - e t h i s c h the new technology is fundamental Cause changes in our whole people. It will will be made possible for the state in the future, due to its new Monopoly income to reduce taxes and levies and also every citizen's apartment, food and clothing and to ensure sufficient pension. As Every citizen has to do the job, which, according to his profession and his disposition in the new State. The unemployment support that is tempting to do the immoral can be eliminated because there is work in abundance becomes. Work is then a moral duty for every citizen; Who does not work must

that wear the consequences themselves. Since the inhumane and harmful work is increasingly being pushed back, the individual can be fed to a growing dimensions and so that the seed for higher ethics in the whole people become. There is also no doubt that the new big ones Thoughts from which the dynamic technology arises, and Due to the deeper penetration into nature's laws of life too Religion and legal care are largely influenced. Real German and truly Christian attitudes will move back into our people and be protected by the new strength. It must not be overlooked that it is not A new physical energy, but actually about the primal force that people can no longer be given. For this reason, Schappeller, his Honoring responsibility is well -conscious, the publication of the New strength linked to the implementation of a social-ethical program, as in the writing “The Social Monarchy” by Dr. Franz Wetzel is laid down.

3. P o l i t i s c h - k u l t u r e l l the new force is also the Make the greatest changes, it would be wrong to strive for political upheavals, for example, and the strength to do so without To want to use deeper consideration; Rather, it is too calculate that the fundamental economic and social conversion, which is associated with the introduction of dynamic technology, associated with a lot of nature, combined with deeper world knowledge, also The real foundations of an organic state structure will reveal. The possibility of largely decentralizing our domestic industry and making the small manufacturer, even competing with the large industry again, the increasingly unsustainable problem becomes Exume our industrial and giant cities with their cultural-destructive effects of a natural solution. It will be possible in the course of a few decades, yes It is necessary to disappear the gray suburbs and rent barracks and to have the park in their place. The working population is in healthy village -like Settlements around the newly created industrial works be made down -to -earth. The desert daily policy

and the decomposing influence of class -fighting demagogues Referred, the family of workers will love to do their homeland again Receive plaice and meaning for higher mental goods. Care in art and culture, and that German spirit, will be Everywhere and can be maintained with the help of the funds obtained by the new power.

The professional thought will be resumed in a modern one Form and it is automatically in place of the party organization step. This gives the future state an inner structure that again the old Germanic aristocratic principle Brings validity, but to every capable and profession releases to the leading offices of the state.

No less necessary, the G r ü n d l i c h e r e f o r m u n s e r e s t a a t l i c h e c h t s l e b e n. The Roman law, that today our jurisprudence is still dominated and that The thing about humans has to be done by a newly created one German law can be replaced. The ancient Aryan legal sources and legal norms are awakened and recovered and Under its determining influence, the religious-moral life becomes our people experience a complete conversion. To what extent the new strength can also intervene here, should be at this point are not continued. For the time being, it is sufficient to find that this is possible.

With the reintroduction of German law, today's immoral banking and stock exchange law and thus the whole bank and Stock -ups of our time disappear. The money will be his falsified character as a goods that even “works”, undressed and its primary determination as an exchange and means of payment. That means alone Already the removal of the worst cancer damage of our national development.

These few hints about the political and cultural effects of the new force can - be easily expanded by logical further thinking to the whole of ethnic life. -

4. At the O r G a n i s a t o r i s c h e n d u r c h f ü h r u n g des planes Schappellers is between the outside and the inside of the To distinguish implementation program. To the outside must The appearance as if it were a political action Or even a coup, be strictly avoided. It is therefore careful

every closer connection to any of the existing fatherland associations or other economic or social policy organizations. But it was With all the fatherland -minded men of personal importance, feelings are taken up in order to inform them of the upcoming dynamic technology and their consequences. This resulted in a strong phalanx for the any protection of the new technology without the power for coup purposes and the like useless Adventure would have been delivered.

The internal organization of the practical implementation is on that Ring system built up. Sit in the innermost ring out of the head The whole system five men, whose five different working groups fall. Each of these five has five again Employees for whom he is responsible for the innermost ring is. Of these five members of the second ring, everyone looks after Another special area of the working group, which he listens. The chairman of every second ring causes the formation of third party rings, whose responsible chairman is a member of the wide ring. So it is branched off System all over the realm and, so to speak, places vividly living Nerve strands with the help of which the steering of the whole big Work can be done quickly and safely. This system is Important for both the proper maintenance of the central and for the reliable operation of the condensed machines. On A condenser hits ten members each.

The innermost ring would include besides the discoverer Karl Schappeller: a responsible specialist for dynamic Technology, for state and social policy, for religious services, for cultural and legal care, for finance, trade and traffic.

This group of people would represent a kind of reform office, so to speak, to which the task is set, the guidelines of the future Development of our public life and with Help of the new strength and that in the further "wrestling" about that Whole people distributed employees to the structure of the true German Empire.

From this objective caused by the nature of the new power, the non -initiates arise with some thinking

The answer to the obvious question: Why does the DESDEKKER not protect them from patents and then hand over it to the industry for evaluation? Yes, why does without Shappeller even on demonstrations and experiments in front of a larger district of interested parties and so -called experts? The Answer reads: Since it is a discovery of unspeakable Novelty and immense scope must be yours Blessing evaluation, completely new ways are taken. It is important to create a new world view. This can only be done through People high spirit. But these people must be there before the primal force can act in effect. She must recognize the essence of that power through one's own thinking Assets that are supposed to serve them afterwards. This is the touchstone for The friends of the Schappeller plant. You should friends of the new Be spirit, not friends of new engines and machines. Dem Geiste, the knowledge, the spirit of honor, not technology And the matter! If you can believe it, you'll grasp it!

Addition to the new edition:

The physical primal force Shapper

(From the works “Logos and BIOS, the foundations of a new one Weltanschauung »by Fritz Klein, 1928)

In the previous chapter, we have illuminated the core problem of the polar indifference from the philosophical, technical and biological side, we have, so to speak, transferred it to organic-dynamic thinking from the static principle. On This way the problem seems to live, it is entirely - but yet Only theoretically like the life declaration of Leduc, not "factual" in the sense of reality. However, the biocentric structures of thought and knowledge should be done in cultural history frequently carried out change in the emotional state and the mindset, beyond an epochaal meaning, claim eternity values, so you have to make decisive and new insights into the creative structure in a vital point grant nature.

These demands come the organic structures in that after when it was used for the already recognized essence element of the radial and peripheral principle with its two reference points use the actually acting forces as equation and thus the Solve the secret of the life process physically.

The researcher Karl Schappeller in Aurolzmünster, Upper Austria, Is the wording of the lifelong pairs of opposites from the Interlocking of knowledge and experience space to the Application of the physical primal force. As Radial poles work the air and water-bound, eccentrically planetary and active forms of life that we in the Organisms observe when peripheral poles, on the other hand, the vacuum -bound, concentric cosmic and latent slumbering Forces of life, - those are power, this power.

Schappeller puts the Riemannian his technical creation The space and the spherical shape of the stars. Then developed

he, like Henning in his systole and diastole of the vibration field of formal infinity, from the radial, energetic active force principle the two references: the Tellurian by Instead of the indifferent poles in the middle analogously by inversion the indifferent zones of the globe two indifferent poles on the Periphery creates 1, the cosmic one by differentiated Pole in the middle of the ball model. 2

If the same spherical model is now set up as a vacuum, it occurs The peripheral, slumbering power principle with the same reference points: the Tellurian, in the tension between inner and outer heat, the cosmic, in the tension Between indoor and outer pressure.

The decisive and fundamental of this deduction is that we do not have a technical construction, but have organic creation in front of us, in this respect as a physical life, equally every knowledge and experience process from the abundance of polar development opportunities (Guardini) only from two correspondence is born with two covers. -The Nernst effect z. B. is that Result of a similarly progressive attempt to relate a further pair of opposite pair of heat and cold in magnetism to the opposite pair of north and south poles in order to use it to achieve the same effect in a purely dynamic way usually from the relationship between magnetism and the purely mechanical movement on the other. The reversal is achieved in the Ettinghaus3 effect by results from the relationship between + and- in electricity, north and south poles in magnetism, warmth and cold.

Schappeller's secular phenomenon clearly penetrates through the Words of the macrocosmic-microcosmic correspondence in the Core problem of indifference. As a lay priest, he goes out of the Sublime show of the adventure space, forms as a compensation for this, partly independent, partly based on science, its own knowledge space and reaches in

1 The differentiated poles in the middle react to every iron while The indifferent poles on the periphery only on magnetic-polarized, in North and south react. 2 two electrical line wires are in principle the steamed Vibration (differentiating spirals) wrapped against each other from the periphery to the middle and connected there. 3 physicists at the University of Graz.

Cosmic space for a totality that we are in the world trevok in will find the highest completion.

The primal force of Schappellers is the radiant, concentric form of energy with which nature works itself and that under the influence of the so -called air pressure, one in an artificial way manufactured thermomagnetism that is offered, also to do mechanical work; In such a way, as Prof. Klaudy4 always challenges it by postulating: «Nature creates the Conditions, then she works anyway ». Also the others Unpublished writings of Klaudys show in this direction. "The energy is controlling in a spatial manner, the subject of the matter", the matter ", Therefore, it cannot be absolute calm in the three -dimensional space Giving, but everything is in constant harmonious movement. (Klaudy).

The strength and space are therefore the plus and minus in the Nature physics to compare with the plus and minus pole of any power source that is able to do work depending on the existing potential gradient. Between these two poles of the Nature switches on Schappeller to the engine, which is exactly the same Form of a differential gradient must correspond to a machine that we are available between the poles of a Switch the electrical energy source. We see the reverse Attempt at the Hamburg physicist S. Plauson, the bullet balloons filled with hydrogen on antenna networks above the ground Fastened and obtained with the soil with the earth.

Let us recognize the new axiom after Klaudy:

«The energy is dominant,
the matter -of -possession of the matter »,

so, so the zero point 5 would remain, but not as a pole, but as an indifference, and as a counterpoint the energetic minus pole appear as a negative activity in the ∞ ∞.

4 “Dimensional World Building” by the late Professor Joseph Klaudy, at a time president of the Austrian engineering and architect association, Vienna (unpublished) 5 The zero point energy of today's physics is a contradiction.

So far, science has basically recognized everything, had to but in a logical consequence come to an incorrect explanation and This is because it is not the minus pole to the plus pole of matter the energy, but the zero of the cosmic space.

However, this comparison can only be in the sense of the poles a spherical magnet that - as we have seen have- probably have a north and south pole on the outside of the ball, but which is indifferent to indifferent iron. Just like in the spherical model mentioned, that is otherwise nothing As a small copy of the earth represents, the polar indifference arises from these two, this is also the case when comparing the material poles “Earth and Cosmos”. Both are “Individual” ineffective, but “in connection”, they result in the form the polar indifference in the everything differentiated and in the active Form appears.

If we now in the sense of Schappeller-Klaudy the mathematical Pulling conclusions, this results from the list of the fundamental primal equation

$$0\ 0 = \infty$$

and

$$. = \infty\ 0 \text{ Any number}$$

The possibility of comparing the infinity of the unit,

like you in the formula $\infty = \infty\ 1$ appear. This wording

speaks to the undisclosed ectopia law, which as a polar supplement to the entropy network, which is well-founded in science must be compared. The infinity, in relation to the unit, i.e. the peripheral principle of formal infinity on the radial, leads to the concept of omnipotence. In contrast, the comparison of unity and infinity embodies

so $0\ ! = \infty$ the concept of fainting. This results in logical

shearing that the omnipotence of the cosmic centralizing, creative factor (aggregation) in world events represents that via unit d. i. Individualization for fabric formation and the development of cosmic and planetary individuals leads. But becomes the individual, i.e. the unit,

Protected against the defenseless of infinity, that means Giving up the individuality of the aggregation, resolution, decentralization, chaos. Let's lead the concept of power (potential Energy) as a force reserve now into physics and turn on the ohmic law, when the simple Formula I = E/R Unexpected perspectives. Let's put I, D.I. the Excavation, which is measured in ampere = the fabric, and e, d. i. The electromotor force (voltage) measured in volt = the concept of strength in general, r, d. i. The resistance that is due to the essence of the material and that is measured in ohm = The term, the philosophical insight results in the solution of the previously controversial fabric and strength problems.

We permut the basic equation set up by Ohm

r C í
=

r I C · =

I C r
=

and use the newly obtained terms, so we receive More than a dead formula. Because with the expansion of the Ohmschen We see law on cosmic references through the comparison of

Material = Power / Power Power =
Material * Power Power = force / fabric

deep into the nature of the polar world structure.

Fabric is therefore the visible world that stands by the Room strength through the denominator, - that is the nature, the logos, a physically precisely fixed number of vibration (cf. Schrödinger) - individualized. (Ur) strength, physically atomistic power appears again when I with the individual 7 fabric multiplied to his denominator, his own essence, then be

6 without the integrated polar. 7 In this regard, everything that is characterized by a uniform cohesion is characterized, i.e. closes the concept of it (atomos).

If the fabric comes the amplitude ∞ and dissolves into force. Power is identical to the nature of the material, and this remains as a form - forming principle if I do the Fabric overload so that it has to disperse (polhypertrophy).

The fundamental set: there is no fabric without strength and none Power without fabric proves to be correct, whereas the term Makes the being, that is, that the Kant's "thing itself" no more can be made accessible to our three -dimensional forms of knowledge, but only directly to the spirit. The "thing itself" also exists outside of strength and Fabric and it was therefore so brittle and inaccessible for a long time, Because with Kant you believed that it could be grasped by pure reason with three -dimensional means. In reality, however, as we saw from the derivation, it did not provide a Tellurian one Three -dimensional grasp, but a cosmic reason. The conclusion that results from it. The people themselves are of eminent importance because they are pure us critically critical of the existence of the nature outside of Power and fabric prove. That the existence of the active Life energies in humans are guaranteed quantitatively, results from the law of maintaining Robert Mayer's energy, that this also maintains their nature, i.e. also qualitatively Stay existing, we believe that we have shown in detail (physical-mathematical immortality evidence).

The simple mathematical basic formulation resulted In logical deduction, automatically the option of beating a physical bridge from the logos to the BIOS. Who is it popular with can get the irrational core out of the rational shell, the immortality evidence that for every true creature in cosmic sense appears indispensable.

We transfer the formulated terms to the different Disciplines, we come to the following comparison, which Experience in the forms of expression, but are basically the same:

Might	Power Material	
P h y s i k Space Weight room	Spatial space dominant	Room -owned

Chemistry Materia Prima - material Secunda inensibilis8 Materia Secunda sensitis

Those who have included the continuum of aggregation9: -

K o h l e n s t o f f f W a s s s e r s t o f f f S a u e r s t o f f f

O n t o l o g i e Spirit Soul Body

K o s m i s c h e Technology Trans -substation transformation Transmutation and permutation

It should be noted that the control of the transformation of forces (forming one form of energy into the other) already was an achievement of the past and the transmutation and permutation (converting one form of fabric into the other) artificial breeding, intersection after the laws of inheritance in the Present is handled, whereas the transubstantiation Or change our future task, the big problem of the alchemists who intended “a thing from his To witness and to replace it with another ».

If the last paragraph is preferably a new nomenclature, we also have to be completed that of the Room in analogy:

D i e m a c h t: is the philosophical or optional space (0 and ∞). D i e k r a f t: The physically real cosmic space (finally large). D e r s t o f f: The measurable spatial dimension (finally small). In the Quaternistic worldview corresponds d e r m a c h t: the indifference, the completely mental calm than The starting point for the effect of the lively force

8 About their being Thomas Aquino in his “Summa Theologiae” The only philosopher gives information when we are alchemical literature refuse. 9 cosmic (Materia Prima). Fluidal, essential (Materia Secunda Asensibilis), gaseous (Materia Secunda Sensitis), liquid also frozen liquid (colloidal condition), firm (crystal).

stood the experience space and for the sensory space created from the - sensual knowledge bound to the material.

It has remarkably shown in the development of the organic thinking structures so far that the great philosophical problems space, time, causality and matter, which in one Time of the predominant of the logo -centered abstraction were capital -controlling, in the biocentric approach as were used to dissolve a larger whole.

«If we now know the life forms of the cosmos, so we have no insight into those of the individual because the step sequence in this continuum is missing. The indifference is The starting point of life and death at the same time and thus The life of the builders of the planetary individuals and death Those of the cosmic »are the world's bodies of all kinds.

This monumental diction of Schappellers is also in the sense of Henning's World Aatem to understand how the answer Wilhelm Ostwalds At Klaudy's question about the whereabouts of entropy: «She comes in Form of culture again ». If we are about this knowledge a materialist was surprised before a human age, so Today is the physiological-psychological formation presentation of world events literally in the air. She compacts in the “Tellurian conclusion” of Hennings and in the «cosmic Closing manager »Gföllners.

The layperson becomes the importance of such organic thinks at best can rescue in subconscious, the progresser But sees the realization opportunities in the clear knowledge of things, the ethicist and sociologist sees in the reconciliation of Religion and science the dawn of a new human morning and only the aesthet does not get its money's worth, he has to Wait until the newly flowering culture back to an end in itself has become.
